

Biovac™

Closed Wound Drainage Systems

During surgery and afterwards, during recovery, it is often necessary to remove fluid and wound secretions from the site of the surgery. When tissue is damaged, the natural immune response of the body drives blood, fluid and immune cells to the site to attempt to repair the tissue. Such fluids can potentially interfere with wound healing and often promote infection.

The drains are used for both prophylactic and therapeutic purposes in a variety of clinical situations including mastectomies, breast augmentations, plastic and reconstructive procedures, urologic, orthopedics, general surgery, and more. They are placed at the end of the surgery at the sight/area where the surgeon would like to drain the excess fluids from. Type of operation and the site will influence the number and kind of drains used.

Biometrix offers a total solution for wound drainage, offering an array of sizes and types of drains and evacuators, thus supplying the physicians with the perfect solution. Customized sets are available.

Wound drainage

Plays a vital role in the process of post-surgical wound healing, designed to enhance drainage, facilitate wound healing and reduce infection.

Biovac™ – the Biometrix complete wound drainage system consists of flat and fluted drains (with/without trocar) as well as various types of evacuators and drainage bags.

200ml/400ml Silicone Bulbs

The Biometrix 200ml/400ml silicone bulbs are intended for various surgical procedures such as, femoral fracture, hip/knee replacement, extremity amputations, colon/rectum surgery, spine surgery, general surgery, prostatectomy, mastectomy, and all other high bleeding procedures.

Benefits

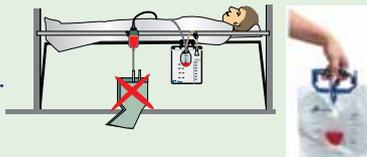

- Drainage ports with an option of use of only one.
- Inlets including 1-way valve in order to avoid backflow of fluid to the patient.
- Ergonomic easy hanging clip.
- Large/medium drainage capacity.
- A relatively simple procedure and set-up.

100ml Silicone Bulbs

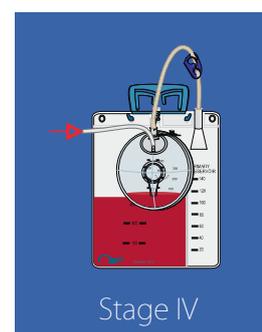

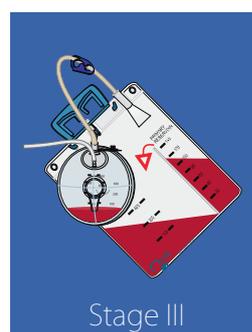

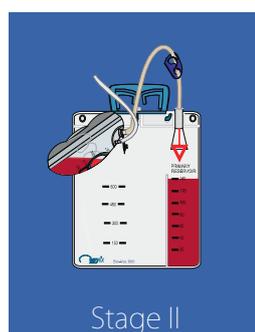

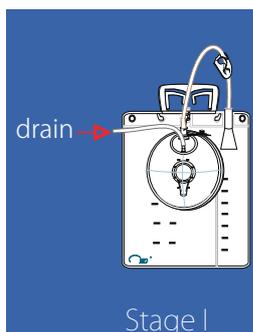

The Biometrix Biovac 100ml bulb is a closed drainage system, intended for procedures of a smaller capacity such as hand surgery, plastic surgery, neurosurgery and minimal post-surgical bleeding procedures.

The Closed System Advantages

- Portable and ergonomic; simple and easy to carry, or hang on bed. 
- Designed to protect against blood born pathogens, especially in post-operative management of surgical drainage systems. 
- Non-reflux return valve for eliminating the risk of blood secretion reflux.
- Complies with OSHA (occupational safety and health administration) regulations and CDC (center for disease control) guidelines.

The Closed System Concept

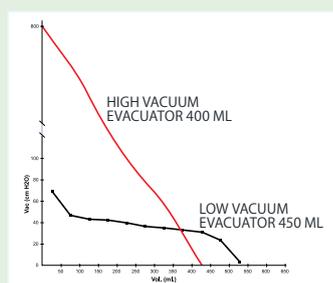

450ml Silicone Evacuator

Biometrix 450ml evacuator is a flat drainage system intended for procedures of larger capacity such as femoral fractures, hip joints, knee joints, extremity amputations, colon/rectum surgery, spine surgery, prostatectomy, mastectomy, and all other high bleeding procedures.

Advantages

- Low constant suction level reduces tissue damage and prevents accumulation of excess fluid, thus facilitating wound healing
- Non-return valve for eliminating the risk of blood/secretion reflux

Fluted Silicone Drains

The Biometrix Fluted Silicone Drains:

- Open channels for increasing flow rate and minimizing blood clotting.
- 100% silicone drain provides tensile strength and flexibility
- Increased comfort for the patient.
- Improved contact with affected tissues.

Suitable for:

- Plastic Surgery
- Head & Neck Surgery
- Cardio & Thoracic Surgery
- General Surgery
- Orthopedic Surgery
- Gynecology

The Biometrix fluted drain system are available in flat & round profiles:  Round Profile  Flat Profile

The Flat Drain Advantages:

- Subcutaneous position prevents sliding out and reduces trauma of drain removal
- Cross section is designed to prevent drain occlusion

Round Drains 10-18Fr Silicone/PVC Drains Flat Drains 4, 7, 10mm Silicone Drains
